

## LARGE CONTAINER COMPANY - MASON, MI

### PROJECT DESCRIPTION

FORTA-FERRO macro synthetic fibers were specified in a large container company located in Mason, MI. This 250,000 sq ft construction on 38 acres is adjacent to the company's existing corporate campus and is dedicated to the development and production of prototypes and packaging solutions. The two-story facility has a total fiber project size of 3,200 cu yd with a fiber dosage of 4.0 lb/cu yd. The contractor chose FORTA-FERRO fibers because they like the idea of **not having to handle steel which causes many problems such as storage and safety concerns**. In the end, this project will bring at least 136 high paying engineering and skilled trade jobs to the region.

### KEY POINTS

- Time Savings
- Improved Safety
- Cost Savings
