

## 'KEEP IT WILD' ARTIFICIAL REEF PROJECT - FREEPORT, TX

### PROJECT DESCRIPTION

The 'Keep It Wild' project is the largest artificial reef ever placed in Texas waters. Artificial reefs are crucial to improving and enhancing marine life in the Gulf of Mexico. The concept for artificial reefs is not new, but the idea of using FORTA-FERRO<sup>®</sup> to **replace steel reinforcement** is - showing both **environmental and economical benefits**. The fibers make structures more durable and longer lasting. They also replace the need for steel, which is more difficult to place and corrosive. By using FORTA-FERRO<sup>®</sup>, it will allow for a **durable and safe** environment for years to come.

### KEY POINTS

- Improved Safety
- Environmentally Friendly
- Lighter Weight of Finished Product

### DETAILS

**Date:** January 2016

**Location:** Freeport, TX

**Dosage:** 4.0 lbs. / cu. yd.

**Fiber:** FORTA-FERRO<sup>®</sup> 2-1/4"

**Application:** Shotcrete
