

## CAPITOL MATERIALS - MACON, GA

### PROJECT DESCRIPTION

Capitol Materials, located in Macon, GA, chose FORTA-FERRO macro synthetic fibers to reinforce their pavement parking lot. This 256-cu yd project originally specified steel, but the company switched to fibers instead at a dosage of 4.0 lb/cu yd. **Cost savings and time** was a major factor for the owners, so by forgoing rebar they were able to cut down on both. In addition, Capitol Materials **increased the fatigue value** and **impact resistance** of their pavement by choosing FORTA-FERRO fibers. This helps **prevent cracking from the heavy truck traffic**. The ready mixer contributed greatly to this project. Because of his reviews of past projects that used FORTA-FERRO fiber reinforcement, he sold using it to Capitol Materials.

### KEY POINTS

- Increased Durability
- Save Time
- Cost Effective

### DETAILS

**Date:** 2019

**Location:** Macon, GA

**Dosage:** 4.0 lb/cu yd

**Fiber:** FORTA-FERRO® 2-1/4"
