

LARGE HOTEL CHAIN - ROYAL OAK, MI

PROJECT DESCRIPTION

A large hotel chain being erected in downtown Royal Oaks, MI is a high profile project for this city. In this 1,900 cu yd job done by Albanelli Cement, a preferred contractor for FORTA Corporation, 4.0 lb/cu yd of FORTA-FERRO fibers were specified. One benefit of using fibers in this slab-on-metal-deck application was the **ease of use** by being able to forgo lifting wire mesh to higher floors. In addition, **time and money were saved** because they did not have to buy and place steel reinforcement prior to pouring the slabs. **Paul Albanelli of Albanelli Cement has stated, "by using fibers we don't have to store wire mesh and deal with the safety factors of using wire mesh."**

KEY POINTS

- Reduced Shrinkage Cracking
- Save Time
- Save Money

DETAILS

Date: October 2017

Location: Royal Oak, MI

Dosage: 4 lbs/cu yd

Fiber: FORTA-FERRO® 2-1/4"
