

FULFILLMENT CENTER - EUCLID, OH

PROJECT DESCRIPTION

Having worked with FORTA in the past, the engineers chose to specify FORTA-FERRO for a large fulfillment center located in Euclid, OH. This slab-on-metal deck project is 23,000 cu yd with a fiber dosage of 7.5 lb/cu yd. Fibers were chosen for the convenience of being able to pump the reinforced concrete up to the decks instead of having to haul steel up multiple floors. This in turn **saves time** and **eliminates working hazards for employees**. In addition, FORTA-FERRO fibers **provide durability** to the concrete both for **surface toughness** and to **help with any cracking**. In the end, the **contractors loved the workability and finish**.

KEY POINTS

- Increase Safety
- Superior Finish
- Increase Durability

DETAILS

Date: 2018

Location: Euclid, OH

Dosage: 7.5 lb/cu yd

Fiber: FORTA-FERRO® 2-¼"
