

OLD DOMINION FREIGHT LINE - HERMISTON, OR

PROJECT DESCRIPTION

The Old Dominion Freight Line, in Hermiston, OR, expanded their facility by placing new concrete pavement to receive the high-volume freight coming and going from their facility. The company chose to use FORTA-FERRO macro synthetic fibers in this 2,000-cu yd project with a fiber dosage of 5.0 lb/cu yd. This dosage level has shown to **assist in reducing potential cracks and assist in holding together cracks that do occur tightly together.** The FORTA-FERRO fibers also make for a **tougher more durable** slab, as well as aid in **impact resistance.** Traditional steel reinforcement, even when placed properly, does not offer the same benefits as a properly reinforced FORTA-FERRO fiber slab. This is another example of a nationally recognized company choosing FORTA-FERRO fiber over competitive fibers and traditional steel.

KEY POINTS

- Reduced Shrinkage Cracking
- Cost Effective
- Increase Durability

DETAILS

Date: 2018

Location: Hermiston, OR

Dosage: 5.0 lb/cu yd

Fiber: FORTA-FERRO® 2-¼"
