

## JOY CONE - HERMITAGE, PA

### PROJECT DESCRIPTION

A large food processing company in Hermitage, PA specified FORTA-FERRO macro synthetic fibers to reinforce a large concrete slab being placed in its new manufacturing facility. This project replaced the originally specified steel with a fiber dosage of 4.0 lb/cu yd, **saving them time and money** while **significantly reducing curling**. The expansion will primarily provide a **smooth, flat, durable floor** for a variety of heavy production line machinery. By replacing steel with fiber, the **project was completed sooner**, with production starting ahead of schedule. **In the end, customers, employees, and their bottom line will benefit from choosing fiber.**

### KEY POINTS

- Reduced Curling
- Save Time
- Increased Durability

### DETAILS

**Date:** 2018

**Location:** Hermitage, PA

**Dosage:** 4.0 lbs/cu yd

**Fiber:** FORTA-FERRO® 2-1/4"
