

BETTER BAKED FOODS - ERIE, PA

PROJECT DESCRIPTION

The pavement in the truck parking area for Better Baked Foods in Erie, PA was reinforced with FORTA-FERRO macro synthetic fibers. Originally steel wire mesh was specified, but the contractor opted for fibers instead. A fiber dosage of 4.0 lb/cu yd was used in this 700 sq yd job. Using FORTA-FERRO gave the pavement a **better wearing surface** on top of the concrete. Owners also wanted a parking area that could **withstand the weight of the high truck volume**. FORTA-FERRO met that request by **increasing durability** and **reducing cracking - demonstrating how well fiber works in pavement**.

KEY POINTS

- Superior Finish
- Increased Durability
- Reduced Cracking

DETAILS

Date: February 2019

Location: Erie, PA

Dosage: 4.0 lb/cu yd
