

THE DEVELOPMENT ON TROY - FERNDALE, MI

PROJECT DESCRIPTION

The Development on Troy (The dot) used FORTA-FERRO macro synthetic fibers in a new mixed-use parking, retail, and office development in the middle of the downtown business district of Ferndale, MI. This 3,000-cu yd project was developed by the city and used a fiber dosage of 4.0 lb/cu yd. By reinforcing the concrete with fiber, the city was able to **save space and reduce costs** since they didn't have to store mesh in the construction area. **Safety issues were also avoided** that can arise from using wire mesh in construction sites by using fiber reinforcements. This high-profile job is hoping to quickly attract young professionals to live and work in the area, so by using FORTA-FERRO, there was a **faster turnaround time on the job**.

KEY POINTS

- Safer Work Environment
- Reduced Construction Time
- Reduced Costs

DETAILS

Date: June 2019

Location: Ferndale, MI

Dosage: 4.0 lb/cu yd
